Your SEO could be better

Your page has some level of optimization but could be improved further. SEO optimization is important to ensure you can maximize ranking potential and drive traffic to your website from search engines. You should ensure your page fulfils common recommended improvements outlined here before moving onto more advanced SEO strategies.

HTML HEADER

Title Tag

You have a title tag of optimal length (between 10 and 70 characters).

Length : 26

Meta Description Tag

Your page has a meta description of optimal length (between 70 and 320 characters).

BODY CONTENT

Header Tags

Your page is making good use of header tags.

HTML header tags are an important way of signaling to search engines the important content topics of your page, and subsequently the keywords it should rank for.

Header Tag	Frequency	
H1	2	<div></div>
H2	2	<div></div>
H3	5	<div></div>
H4	0

On-Page Link Structure

We found 40 total links. 15% of your links are external links and are sending authority to other sites. 0% of your links are nofollow links, meaning authority is not being passed to those destination pages.

Broken Links

We have found 1 broken link(s) on your page. Broken links are confusing to users and can reduce traffic and ranking ability of pages.

Friendly URLs

Some of your link URLs do not appear friendly to humans or search engines. We would recommend making links as readable as possible by reducing length, file names, code strings and special characters.

OTHER

Robots.txt

Your website appears to have a robots.txt file.

XML Sitemaps

We have not detected or been able to retrieve a XML sitemaps file successfully.

A sitemap includes a list of your pages that are available for crawling, as well as other useful information for search engines such as last update times and priority of pages. Sitemaps are recommended to ensure that search engines can intelligently crawl all of your pages.

Analytics

Your page is using an analytics tool.

Usability

Your usability needs improvement

Your page has usability issues across devices. Usability is important to maximize your available audience and minimize user bounce rates (which can indirectly affect your search engine rankings).

Device Rendering

This check visually demonstrates how your page renders on different devices. It is important that your page is optimized for mobile and tablet experiences as today the majority of web traffic comes from these sources.

Use of Mobile Viewports

Your page either does not have a meta viewport specified, or it is configured incorrectly. Viewports are important to ensure that your page content sizes appropriately for different devices, in particular mobile and tablet.

Flash Used?

No Flash content has been identified on your page.

iFrames Used?

There are no iFrames detected on your page.

Favicon

Your page has specified a favicon.

Legible Font Sizes

There is some text on your page that is small and may not be legible enough for particular users. We recommend reviewing all text on your page in different devices to ensure that it is of appropriate size.

Tap Target Sizing

Some of the links or buttons on your page may be too small for a user to easily tap on a touchscreen. Consider making these tap targets larger to provide a better user experience.

Performance Results

Your performance could be better

Your page's performance has some issues and room for improvement. Performance is important to ensure a good user experience, and reduced bounce rates (which can also indirectly affect your search engine rankings). We recommend addressing the highlighted factors below.

Page Speed Info

Your page's server response time is reasonably low which is good for load speed and user experience.

Server Response

All Page Content Loaded

All Page Scripts Complete

Page Size Info

Your page's file size is quite large which, regardless of other optimizations, can reduce load speed and impact user experience. A general rule is to keep your page under 5MB in total file size.

Page Size Breakdown

Number of Resources

This check displays the total number of files that need to be retrieved from web servers to load your page. As a general rule, having more files to retrieve increases the number of server requests and can subsequently increase page load time. It is a good idea to removing unnecessary files or consolidate files like styles and scripts where possible.

JavaScript Errors

Your page is not reporting any JavaScript errors.

GZIP Compression

Your website is using GZIP compression.

Optimize Images

Your page appears to include images which are poorly optimized. Properly formatting and compressing images can have a significant impact on page load performance.

Minification

All your JavaScript and CSS files appear to be minified.

Deprecated HTML

No deprecated HTML tags have been found within your page.

Inline Styles

Your page appears to be using inline styles. Inline styles are an older coding practice and discouraged in favor of using CSS style sheets, due to their ability to degrade page load performance and unnecessarily complicate HTML Code.

Your social could be better

You do not appear to have a strong social presence or level of social activity (or we may just not be able to see your profiles!). Social activity is important for customer communication, brand awareness and as a marketing channel to bring more visitors to your website. We recommend that you have all of your profiles listed on your page for visibility, and work to build a following on those networks.

Facebook Connected

Your page has a link to a Facebook Page.

Twitter Connected

No associated Twitter profile found as a link on your page.
